Mayo 2026

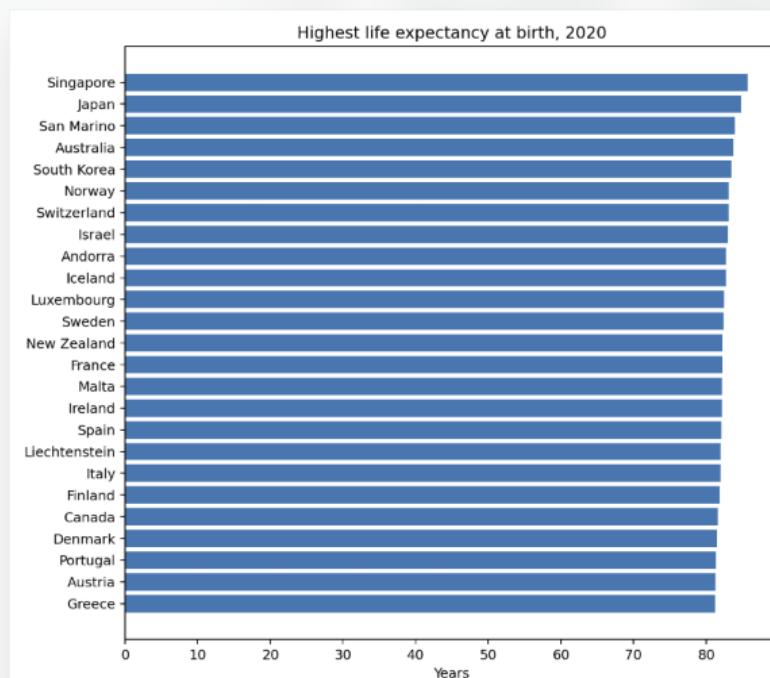

Life expectancy at birth, 2020

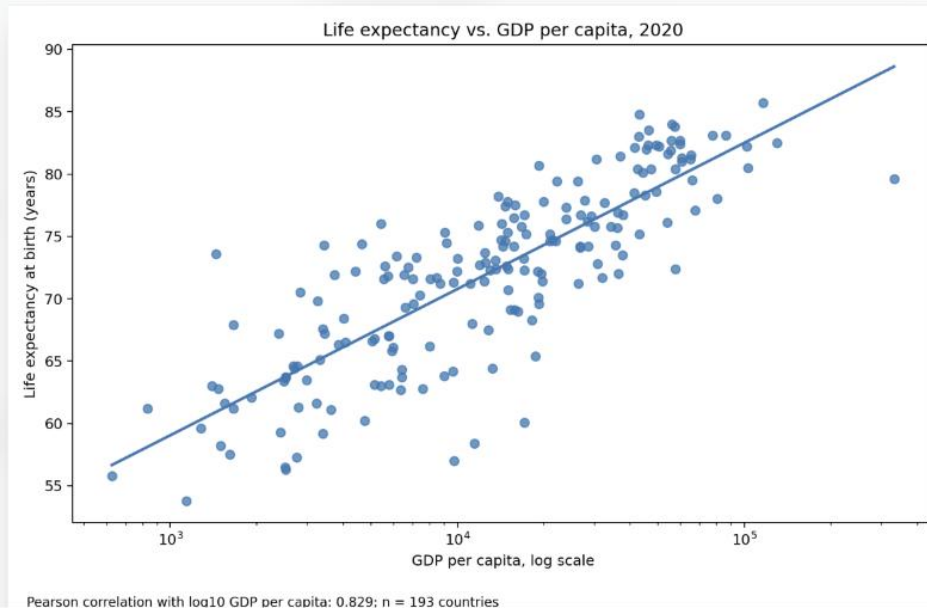

GDP per capita PNG preview

Life expectancy PNG preview

Key result: In 2020, GDP per capita and life expectancy show a positive relationship. The Pearson correlation between **log10 GDP per capita** and **life expectancy** is **0.829** across **193 countries**. Countries with higher GDP per capita generally have higher life expectancy, with the relationship flattening at higher income levels.

About the IA..

The process of interacting with AI tools is difficult until you become familiar with how to obtain the right information. It's challenging when programming language is required to use the tools; however, the speed of data analysis is surprising, something that previously would have required more extensive knowledge. With these tools, I can better formulate requests to the AI to obtain the required information.
